

Full Stack

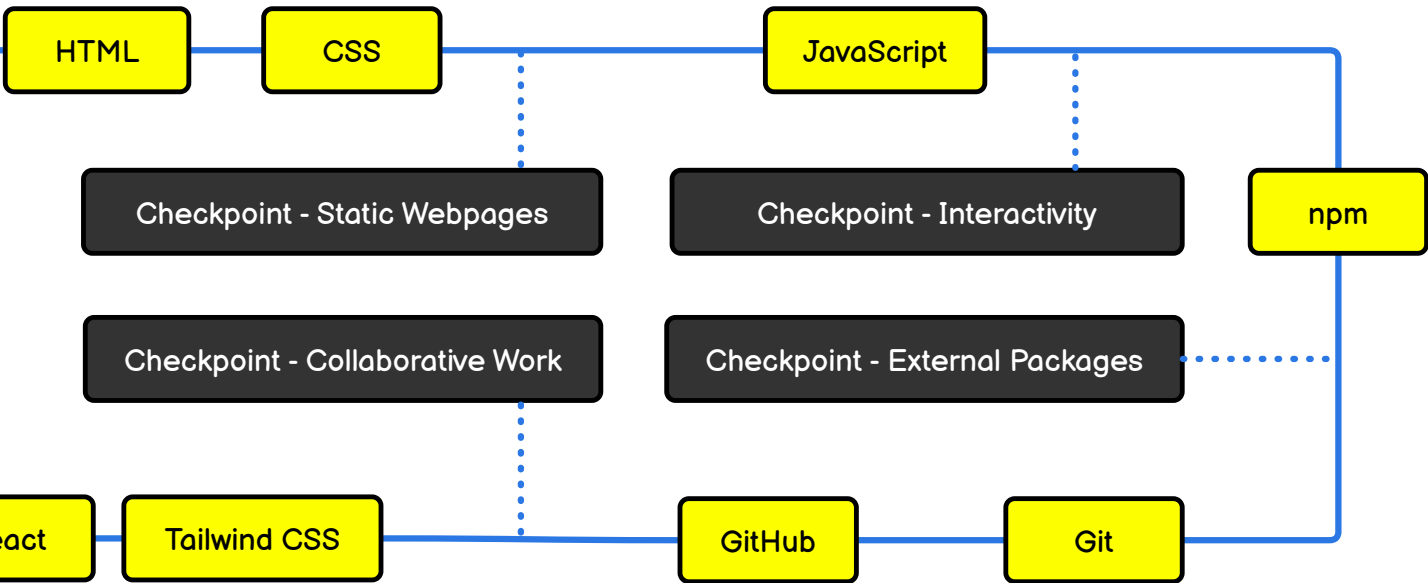

If you are already a full-stack developer you should visit the following tracks.

FrontendBackendDevOps

Target audience for this roadmap is absolute beginners wanting to get into full-stack development.

Key topics to learn

Project ideas and suggestions

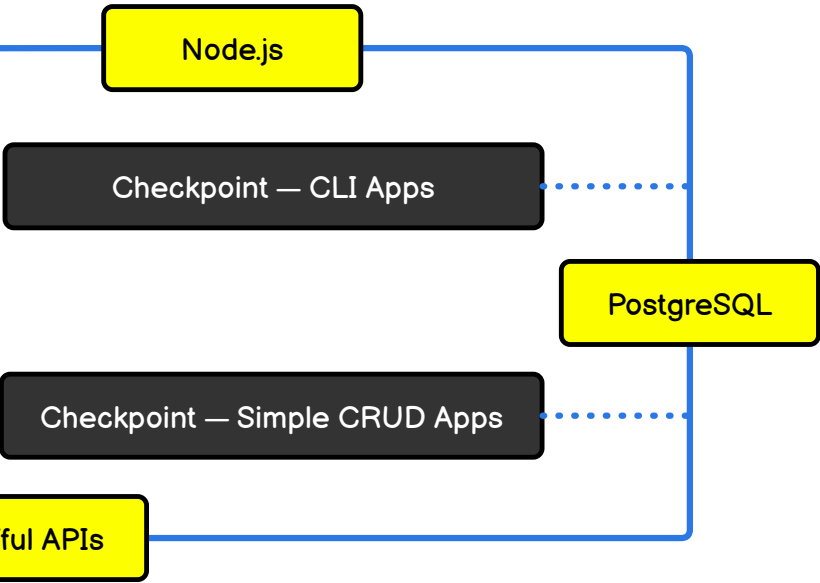

Feel free to skip these and revisit after learning Backend

Checkpoint - Frontend Apps

You can pick any backend programming language. My recommendation is Node.js because you are already familiar with JavaScript and it's easier to pick.

Start Backend Development

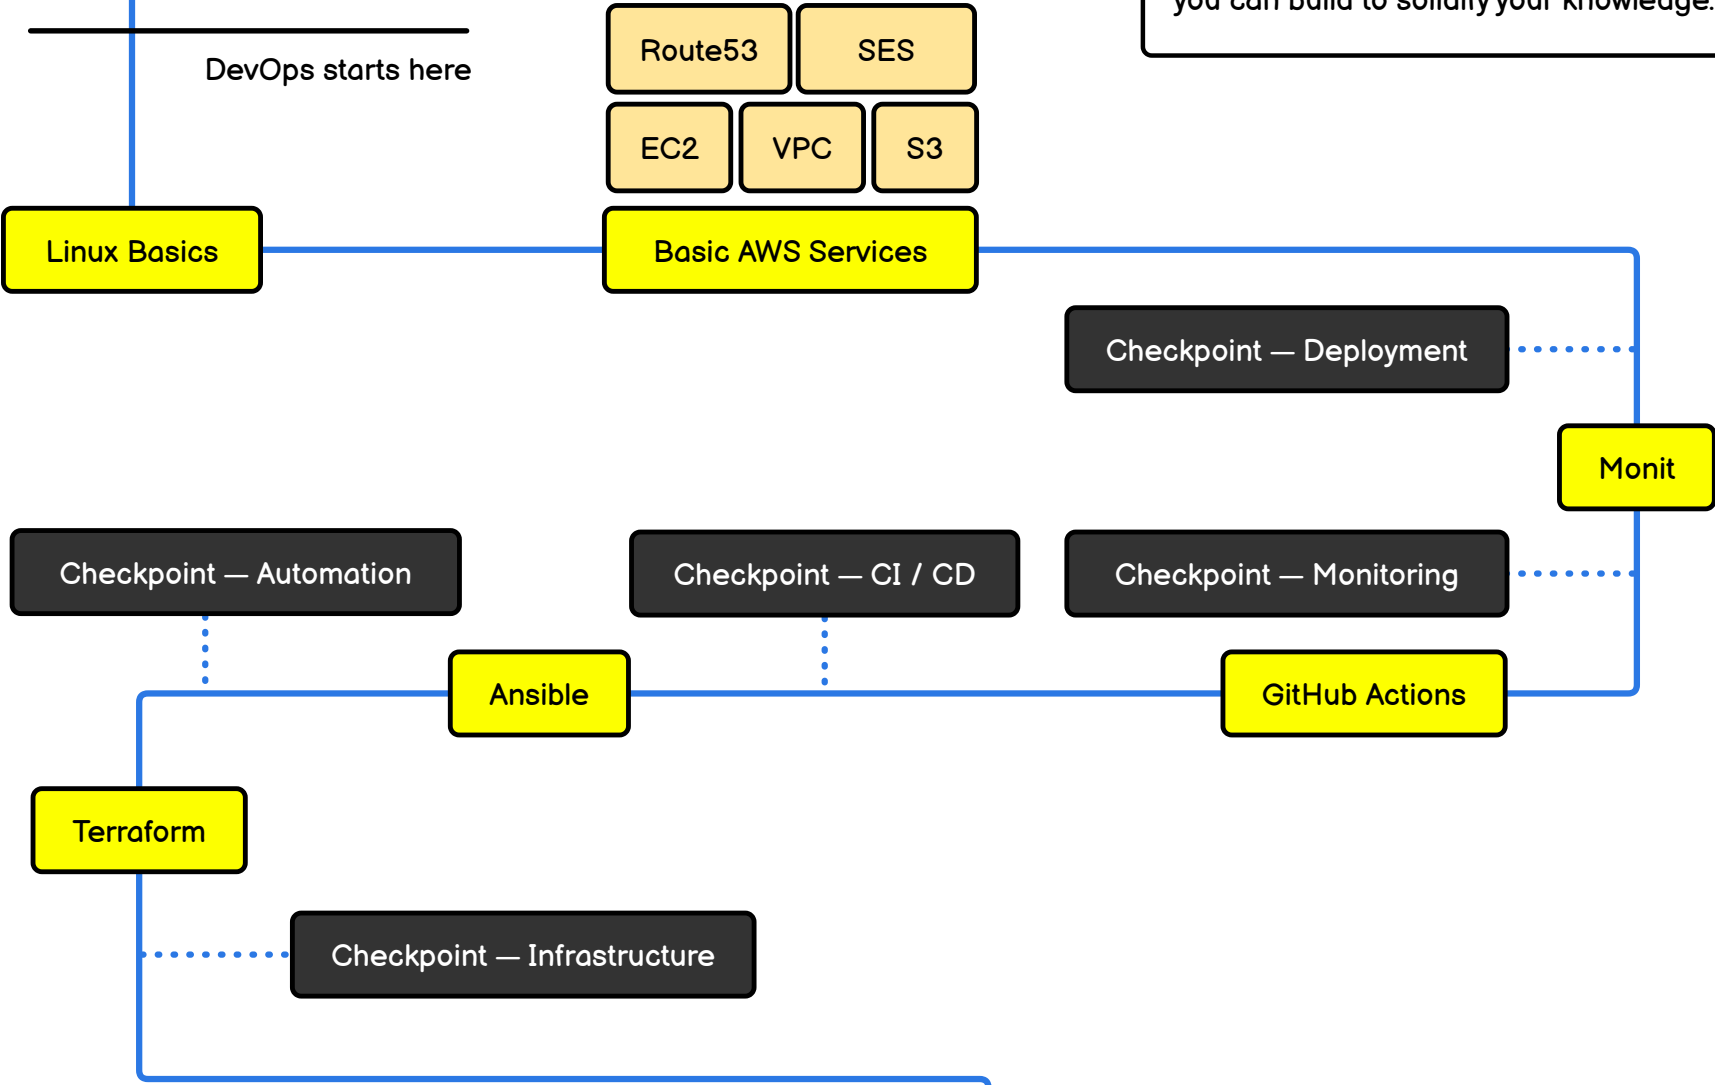

Backend Starts here

Checkpoint - Complete App

Use the checkpoints and do not forget to practice what you learn. There are project ideas at each checkpoint that you can build to solidify your knowledge.

DevOps starts here
